Patented Self-Cleaning Condenser

Only Turbo Air
**No Maintenance
for three years**

Dust accrue rapidly in areas where refrigeration is installed and used. Dust is drawn through the fan and accumulated, preventing the condenser from properly releasing heat. This causes the compressor to increase its pressure on refrigerants, increasing the possibility of the compressor breaking down.

The 'Self-Cleaning Condenser' cleans the condenser with a rotating brush that moves up and down 2-3 times a day, preventing any dust build-up and maintaining the highest efficiency while saving additional energy.

Condenser Coil Maintenance Pays Off

(‘Energy Manager Today’)

Richard Fennelly, the Director of Product Development for CoilPod LLC says that there is not a lot of research on how much money can be saved, but all signs point to a significant amount. It is also a distasteful job that often gets pushed aside.

The condensers coils that are at the heart of cooling equipment need to be cooled. This cooling is provided by a fan that draws in air. That air carries minute pieces of debris along for the ride. The vents get clogged and the fan must work harder to do its job. This causes three problems: The fans use more electricity and therefore are costlier to run, they require more service calls and, ultimately, many fail. Often, these failures result in ruined inventory.

Addressing this problem leads relatively easy gains. The greatest are “grab and go” type refrigerator units common in delicatessens and convenience stores since they are in high trafficked public areas. Fennelly, whose company offers a new approach to condenser coil cleaning, pointed to statistics compiled by the Food Service Technology Center (FSTC) and presented at the Restaurant Facility Managers Association and Commercial Food Equipment Service Association conferences last year.

The estimates, which presumably are based on refrigeration devices the FSTC found in the field, are predicated on an electric rate of \$0.11 per kWh. A six-year-old double door merchandiser costs \$1,325 per year when dirty. **Operating expense is cut to \$625 – a reduction of 47 percent – when the coils are cleaned.** A large double door fridge (age unspecified) cost \$950 per year to run. **That cost is shaved by 46 percent, to \$433, when the coils are cleaned.** The other examples are in the same range.

Fennelly said that food service technicians often say that the most common cause of service calls are problems that arise from clogged condenser coil housings. Typically, the approach to cleaning debris is to use a brush, vacuum or wetvac. These steps are a good start but, ultimately ineffective because the problems often are deeper in the apparatus and can’t be dislodged in this way.

Natural Refrigerant

Natural refrigerant is used in all Turbo Air refrigerators

All temperature information provided is obtained through NSF standard testing environment.

Each of our products certifications may differ under certain specifications and various options.

The most common refrigerants that have been used in the industry are HFCs (hydrofluorocarbons R-134a, R-404A), replacements for CFCs (chlorofluorocarbons) which are harmful substances proven to deplete the ozone layer. HFC's are not directly ozone-depleting but these strong greenhouse gases have been shown to have a negative impact on the environment, contributing to global warming up to 4,000 times more than CO₂. These GWP refrigerants are listed among substances regulated by the Kyoto Protocol of 1992, and HFC substances such as R-134a and R-404A will be banned by new U.S government regulations starting January 1, 2019.

The industry must embrace the new climate-friendly natural refrigerant HC (hydrocarbons).

Turbo Air is committed to the environment with innovative and eco-friendly technology!

By utilizing our innovative, eco-friendly technology, Turbo Air has now replaced all previous refrigerants with climate-friendly hydrocarbons R-600A (Isobutane) and R-290 (Propane). In our efforts to protect our environment, we have decreased energy consumption by 25%.

What is Hydrocarbon?

HC (hydrocarbon) is a sustainable alternative to HFC. Hydrocarbons (R-600A, R-290) are natural refrigerants that have no ODP (ozone depleting potential) and very low GWP (global warming potential). Moreover, HC based equipment have been shown to be more energy efficient compared to HFC based equipment, which translates to lower operating costs. The EPA approved R-290 (Propane) and R-600A (Isobutane) as acceptable refrigerants for use in commercial refrigeration, stand-alone equipment refrigerators, and freezers.

U.S. Environmental Protection Agency [2010] EPA-430-F-10-043

- **Self-Cleaning Condenser equipped (patented, no maintenance required)**
- Hydrocarbon refrigerants (R-290)
- Hot gas condensate system
- Cold air distribution system
- Top mount compressor
- Digital temperature control & monitor system
- LED interior lighting
- A **22 gauge** stainless steel exterior & a stainless steel interior, durable stainless steel wire shelves
- Anti-corrosion coated evaporator
- Left hinged models available
- 4" casters & door locks standard
- Legs available for all models (optional)

***3 Year Parts and Labor Warranty *Additional 2 Year Warranty on Compressor**

• Self-Cleaning Condenser equipped (patented, no maintenance required)

- Hydrocarbon refrigerants (R-290)
- 'Turbo Freeze' for faster freezing and smart fuzzy defrost, Turbo Cooling
- Two separate refrigeration systems (M3RF45-2-N only) **freezer 35%, refrigerator 65%**
- Hot gas condensate system
- Digital temperature control & monitor system
- Stainless steel exterior with AL interior with stainless steel floor
- Adjustable PE coated wire shelves
- LED interior lighting
- Top mount compressor
- Left hinged model available (M3RF19-2-N-L)
- Anti-corrosion coated evaporator
- 4" casters & door locks standard
- Legs available for all models (optional)

SOLID DOOR DUAL TEMPERATURE

Model	#of Doors	CU./FT.	#of Shelves	HP	AMPS	Crated Weight (lbs.)	L x D ¹⁾ x H ²⁾ (inches)
M3RF19-2-N(-L)	2	8.39(F) 8.87(R)	2	3/8+	4.8	220	25 1/4 x 31 1/2 x 72 1/8

M3RF19-2-N

M3RF45-2-N

Door pressure release device (Patented, M3RF45-2-N only)

Pressure relief doors are designed to eliminate vacuum pressure and allow easy, fast door opening.

Reach-Ins M3 Series Heated Cabinets

- Digital temperature control & monitor system
- Ducted fan air distribution system
- ON/OFF switch is located on control panel
- Stainless steel cabinet construction
- LED interior lighting
- High-density polyurethane insulation
- Self-closing doors with stay open feature at 120°
- 4" casters & door locks standard
- Easy replaceable one piece magnetic door gaskets
- Adjustable chrome-plated wire shelves (M3H24-1, M3H47-2, M3H24-1-G, M3H47-2-G)
- Stainless steel universal tray slides standard (M3H24-1-TS, M3H47-2-TS, M3H24-1-G-TS, M3H47-2-G-TS)
- Legs available for all models
- Full and half pan racks available (M3H24-1, M3H47-2, M3H24-1-G, M3H47-2-G)
- Field reversible door hinge (M3H24-1, M3H24-1-TS)
- Left hinged (M3H24-1-G-L, M3H24-1-G-TS-L) models available

Door pressure release device (Patented)
Pressure relief doors are designed to eliminate vacuum pressure and allow easy, fast door opening.

SOLID DOOR HEATED CABINETS

MWR-27S-N6

MWR-34S-N6

* Each drawer accommodates up to 6" deep sixth (1/6) sized pans (drawer pans not included)

• Self-Cleaning Condenser equipped (patented, no maintenance required)

- Hydrocarbon refrigerants (R-290)
- 16 Ga. heavy duty stainless steel top and body, durable stainless steel drawers
- One-piece reinforced stainless steel insulated countertop eliminates heat transfer
- Digital temperature display on front panel
- CFC free, High-density foamed-in-place polyurethane insulation
- Front breathing & side mount compressor
- Anti-corrosion coated evaporator
- 4" casters standard
- Legs available: 6" (optional)
- Casters available: 1", 2.5", 5" (optional)
